How proxy can act as a Real Subject because they implement from the same super-type (via interface or abstract class

Protection proxy controls access to the method based on caller
By proving list of access right.
        -> if an authorized call comes in, insead of letting the call go through it blocks

Remote proxy:
    It's a true proxy because it has a virtual presence.

We program to concretion -> because somebody has to know the details of the real subject.
